

74% of ALL Deaths ‘Directly’ Linked to Covid Shots, Autopsy Data Shows

S slaynews.com/news/74-all-deaths-directly-linked-covid-shots-autopsy-data-shows

July 25, 2024 - 12:54 pm

A damning new study has revealed that autopsy data shows Covid mRNA shots have overwhelmingly contributed to all-cause deaths around the world.

The bombshell study found that Covid shots are “directly” linked to a staggering 73.9% of all deaths.

The research team behind the study was made up of some of America’s leading oncologists, cardiologists, doctors, and scientists, including:

- Nicolas Hulscher
- Paul E. Alexander
- Richard Amerling
- Heather Gessling
- Roger Hodkinson
- William Makis
- Harvey A. Risch
- Mark Trozzi
- Peter A. McCullough

The study found that 73.9% of all deaths were “directly due to or significantly contributed to” by Covid mRNA injections.

The autopsy data exposes a direct link “between COVID-19 vaccination and death,” the researchers note in their study’s paper.

In the “Background” section of the study’s paper, the researchers explain:

“The rapid development of COVID-19 vaccines, combined with a high number of adverse event reports, has led to concerns over possible mechanisms of injury including systemic lipid nanoparticle (LNP) and mRNA distribution, Spike protein-associated tissue damage, thrombogenicity, immune system dysfunction, and carcinogenicity.

“The aim of this systematic review is to investigate possible causal links between COVID-19 vaccine administration and death using autopsies and post-mortem analysis.”

In the “Methods” section, they note:

“We searched PubMed and ScienceDirect for all published autopsy and necropsy reports relating to COVID-19 vaccination up until May 18th, 2023.

“All autopsy and necropsy studies that included COVID-19 vaccination as an antecedent exposure were included.

“Because the state of knowledge has advanced since the time of the original publications, three physicians independently reviewed each case and adjudicated whether or not COVID-19 vaccination was the direct cause or contributed significantly to death.”

The research team initially identified 678 studies.

After screening for our inclusion criteria, the researchers included 44 papers for the study that contained 325 autopsy cases and one necropsy case.

The mean average age of death was 70.4 years.

The most implicated organ system among cases was the cardiovascular (49%), followed by hematological (17%), respiratory (11%), and multiple organ systems (7%).

Three or more organ systems were affected in 21 cases.

The mean time from vaccination to death was 14.3 days.

Most deaths occurred within a week from last vaccine administration.

A total of 240 deaths (73.9%) were independently adjudicated as directly due to or significantly contributed to by COVID-19 vaccination.

Among those directly linked to Covid shots, the primary causes of death include:

- Sudden cardiac death (35%)
- Pulmonary embolism (12.5%)
- Myocardial infarction (12%)
- VITT (7.9%)
- Myocarditis (7.1%)
- Multisystem inflammatory syndrome (4.6%)
- Cerebral hemorrhage (3.8%).

In the “Conclusions” section of the paper, the authors write:

“The consistency seen among cases in this review with known COVID-19 vaccine mechanisms of injury and death, coupled with autopsy confirmation by physician adjudication, suggests there is a high likelihood of a causal link between COVID-19 vaccines and death.

"Further urgent investigation is required for the purpose of clarifying our findings."

The researchers warn that findings "indicate the urgent need to elucidate the pathophysiologic mechanisms of death with the goal of risk stratification and avoidance of death for the large numbers of individuals who have taken or will receive one or more COVID-19 vaccines in the future."

"We found that 73.9% of deaths were directly due to or significantly contributed to by COVID-19 vaccination.

Our data suggest a high likelihood of a causal link between COVID-19 vaccination and death." <https://t.co/yjmPhpesS7>

The study comes amid a growing body of evidence linking the Covid mRNA injections to multiple deadly health conditions and related sudden deaths.

As Slay News recently reported, another bombshell new global study of 2.7 billion people has just determined that COVID-19 did not cause any excess deaths during or after the pandemic, despite widespread claims to the contrary from health agencies around the world.

However, the same explosive study has revealed that Covid mRNA shots, which were supposedly unleashed on the public to tackle the virus, have caused millions of excess deaths globally.

The study's comprehensive 521-page report contains hundreds of figures and a detailed examination of excess all-cause mortality during the years 2020 to 2023 in 125 countries.

The dataset analysed by the researchers comprises approximately 2.7 billion people which is about 35% of the world's population.

The researchers calculated that the global death toll associated with Covid mRNA shots, up to 30 December 2022, was 16.9 million people.
